

CORPORATE OVERVIEW

A Model for Efficient Business Systems

Delivering high-quality patient care requires managing multiple vendors, complex technologies and technical resources to maximize productivity and efficiency—all while lowering costs. Care providers are turning to 7 Medical Systems’ affordable on-demand solutions to improve and manage the entire patient care experience, including electronic medical records (EMR), practice management systems (PMS), digital imaging and more.

Avoid Costly Infrastructure Buildout

7 Medical is a leading service provider offering care providers an outsourced platform of services for managing their healthcare businesses at affordable monthly rates. Instead of investing in and managing your own hardware and software, 7 Medical conveniently hosts your software applications in its secure, redundant data center. This enables care providers to outsource the dedicated expertise and back-end infrastructure necessary to make front-end business applications, such as EMR, PMS and digital imaging, run smoothly. You can avoid expensive infrastructure buildout and still take advantage of enterprise-grade applications and infrastructure to meet your healthcare business needs.

7 Medical's services platform manages the hardware, software and technical resources necessary to run your healthcare business.

7 Medical Delivers IT Services On Demand

7 Medical provides small and medium healthcare practices with a turnkey solution for managing mission-critical business applications and network infrastructure. Our consultative approach includes network planning and configuration, systems engineering and optimization, risk management, rapid deployment, around-the-clock support and ongoing upgrades. As your business partner, we take care of your IT systems so that you can focus on meeting the needs of your patients.

YOUR APPLICATIONS AND INFRASTRUCTURE PARTNER

Wireless Configuration
Implementation
Optimization

7 Medical technology experts assess your needs and determine the best network applications strategy. Strong partnerships with leading medical applications vendors ensure efficient deployment and integration of business systems.

Outsourcing Services

Managed Infrastructure
Applications Hosting
Onsite/Remote Hosting
Data Center Facilities
Disaster Recovery
Content Delivery

Multiple redundant, state-of-the-art data centers offer reliable hosting of critical infrastructure and applications. Flexible options available for fully-managed services including on customer premises. Business continuity initiatives ensure smooth, trouble-free operations.

Software as a Service (SaaS)

On-demand Services
Utility-based Model
Web-based Services

Pay-as-you-go approach leverages the Internet and revolutionizes the way medical software is delivered, ensuring availability of applications to the entire healthcare community. Improved access to information results in higher satisfaction, performance and cost savings.

WHY 7 MEDICAL?

OPERATIONAL EFFECTIVENESS

Enterprise-grade IT computing platform that enables practices to run more efficiently and cost effectively.

FLEXIBLE DELIVERY MODELS

A wide range of innovative services available—managed at your site or at one of our state-of-the-art data centers.

TECHNOLOGY LEADERSHIP

Proven track record of delivering technology expertise and innovation to meet the needs of healthcare practices.

RAPID IMPLEMENTATION

Quickly deployed systems that realize immediate ROI while reducing risk.

PREDICTABILITY

Fixed or usage based monthly service fees allow more accurate management of IT budgets.

ACCOUNTABILITY

Service Level Agreements (SLAs) maximize service up-time.

COLLABORATIVE PLATFORM

Centralized access to infrastructure and applications provide visibility and control over critical business systems.

GLOBAL PARTNER NETWORK

Leverage extensive partner network to integrate services into a single, fully-managed solution that minimizes risk.
