

## 7p PRM-ON-DEMAND SUITE

Delivering practice automation that lets you focus on patient care.

### TRANSITION TO EMR—INTEGRATED AND AFFORDABLE

Physicians depend on quick access to patient charts to maintain the highest standards of patient care. Advances in information technology are enabling physicians to transition to electronic medical record (EMR) systems to improve quality of care, productivity and revenues—as well as to meet regulatory compliance requirements. But choosing an integrated EMR system is a daunting task requiring you to manage multiple vendors and complex systems.

### GOING ELECTRONIC WITHOUT THE CAPITAL COSTS

Deploying an EMR strategy requires integrating to and/or replacing your practice management system (PMS), radiology and laboratory applications, which typically means making significant investments in hardware, software and technical staff to implement and support these systems. In contrast, 7 Medical Systems provides a viable, more cost-effective alternative with its hosted patient relationship management (PRM) solution, the 7p Suite.™

The 7p PRM-on-Demand™ Suite provides one integrated patient management platform, including EMR, PMS, lab, radiology and mobile medical devices, to deliver flexible, advanced features and enhanced productivity at affordable monthly rates with minimal upfront capital expenditures.

### 7p SUITE

The 7p PRM-on-Demand Suite provides you with an enterprise-wide on-demand solution for managing the entire patient care cycle—from scheduling, patient charts, prescriptions, lab orders, and referrals to claims processing, billing and reporting. Moving to an efficient electronic system keeps you and your staff more productive in delivering quality patient care.

The 7p Suite is hosted in 7 Medical System's secure, redundant data center, so you can avoid costly investments in hardware, software and technical support staff. Access to patient information is available around-the-clock either online or offline, in your office or remotely through a wireless connection. And 7 Medical's industry-certified engineers are available 24/7 to respond to your ongoing maintenance and support needs.

### 7p SUITE ADVANTAGES

Efficient, fully-integrated EMR and PMS strategy utilizing affordable per provider or per claim pricing.

Avoid costly upfront and ongoing investments in hardware, software and technical staff.

Disaster recovery and business continuity benefits inherent to 7 Medical Systems' offsite hosting solution, including 24/7 service and support operations.

Increase productivity with convenient online and offline access to EMR and PMS systems.

Exchange healthcare data, such as receiving lab and radiology results, between your EMR, PMS and other applications.

Easily integrate patient information from mobile medical devices to your EMR and PMS.

#### 7p Suite

7p Lab

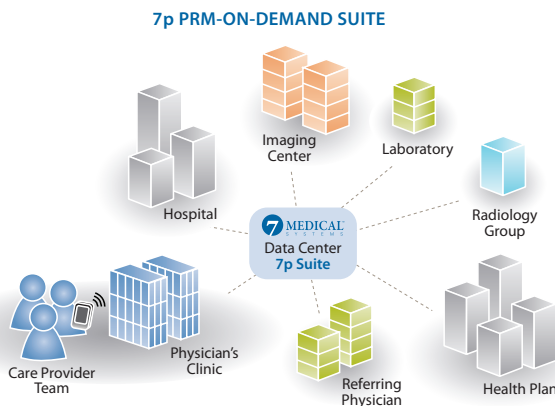

7p RIS

Device Integration

The benefit of an on-demand PRM system is that you can choose the level of service you need to meet changing demands of your individual practice—and you pay only for what you use.

To help you manage your costs, 7 Medical offers flexible per provider or per claim pricing. Usage-based rates provide for the changing needs of your business.

*Conveniently hosted in 7 Medical Systems' secure, redundant data center, the 7p PRM-on-Demand Suite enables everyone on the care provider team to share and exchange patient information electronically. Other key advantages include electronic charting through wireless devices and electronic claims processing.*

For added flexibility, 7 Medical can work with you to deploy a fully-integrated EMR and PMS system. Or, you can choose to integrate an EMR system to your existing PMS. 7 Medical can help you determine and deploy the right strategy for your business.

In addition to an integrated EMR and PMS, the 7p Suite conveniently allows added functionality, such as sending and receiving patient laboratory and radiology orders and results with 7p Lab™ and 7p RIS.™

## 7p LAB

7p Lab is a software service allowing you to send lab orders, receive lab results electronically and upload them directly into patient electronic health records. Unlike waiting for lab results to be delivered manually, you can quickly diagnose patient conditions and prescribe the appropriate care.

Supporting lab files from the most widely available providers, 7p Lab can send and receive files from popular applications such as Quest Diagnostics and LabCorp.

## 7p RIS

7p RIS is a software service that allows you to send and receive patient digital imaging orders and results directly from your EMR/PMS/HIS/RIS systems. The highest security standards are maintained to ensure HIPAA compliance while delivering improved productivity and the best possible quality of care.

The service enables you to exchange healthcare data between these systems using HL7, DICOM and SQL protocols. Hosted in 7 Medical's secure data center, you can avoid hardware and software expenditures and pay for only what you use.

## MOBILITY AND MEDICAL DEVICES

The 7p Suite provides advanced capabilities to support wireless medical devices such as motion tablets for charting patient information, EKG, or other mobility devices. The system seamlessly integrates patient information between mobile devices and EMR, PMS or HIS systems, and is accessible by all authorized users.
